

Potential availability and access to primary health care in a neighbourhood

Sook-Yee Chong

Introduction

- Access to health care services is important in maintaining health, preventing and managing disease, and reducing premature death. This means that availability and timely access to primary health services is needed.

Accessibility to primary health service
(improvingphc.org/first-contact-accessibility)

Aim

- The aim of this study is to determine if residents in a borough would have quick access to primary health services in their respective neighbourhood.

Accessibility to primary health service
within a neighbourhood
(improvingphc.org/first-contact-accessibility)

Methods

- Foursquare API is utilised to pull the location data in New York.
- A list of venues are requested, returning a hierarchical list of categories. Response fields like Venue Name, Venue Location and Venue Category were requested from Foursquare.

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category

Population data from data.cityofnewyork.us

Methods

- K-means clustering algorithm was used to find clusters within the dataset.
- This is to differentiate neighbourhoods based on locations and number of medical centres and doctor's clinics.

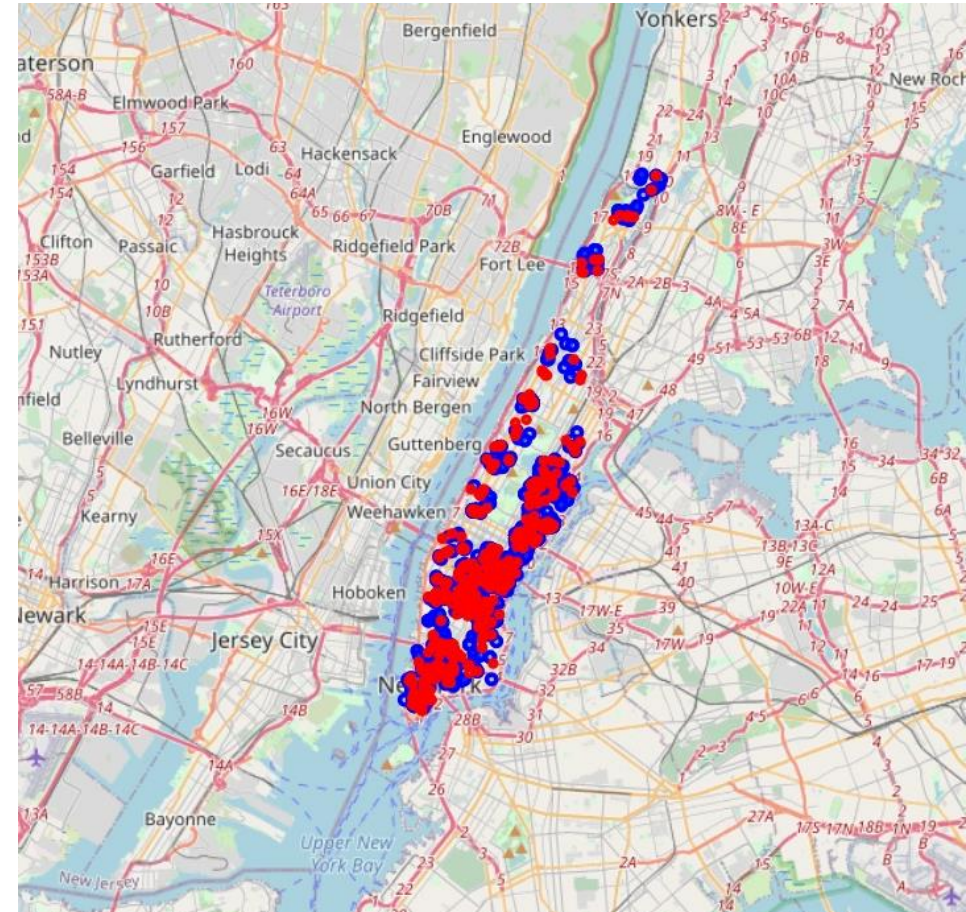

Results

- Number of doctor's office and medical center in each neighbourhood
- Ranked according to doctor's office

	Neighborhood	Doctor's Office	Medical Center
28	Roosevelt Island	87	12
1	Carnegie Hill	85	13
16	Lenox Hill	82	16
35	Upper East Side	77	21
18	Little Italy	73	14
17	Lincoln Square	72	14
5	Civic Center	65	20

32	Tribeca	0.091432	0.073146
14	Hudson Yards	0.073146	0.109719
21	Manhattanville	0.036573	0.091432

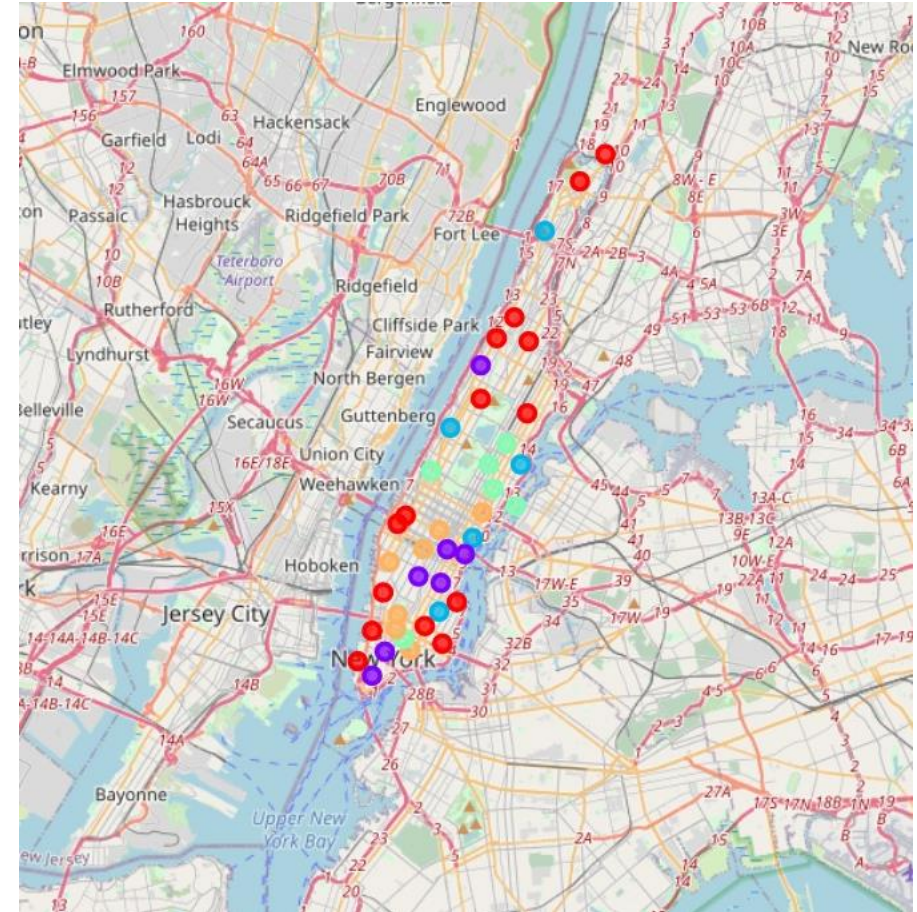

Discussion

- Cluster 3 (in light green) has the highest number of doctor's centres and medical centres
- This is not surprising as that is close to the centre of Manhattan.
- Those in red has the least number of doctor's centres and medical centres.

Discussion

- The closer you are to centre of Manhattan, there are higher chances of accessing primary health services.

Conclusion

- Neighbourhoods closest to the centre have the highest number/density of doctor's clinics and medical centres.
- Neighbourhoods with the least number of doctor's clinics and medical centres were also identified. So residents in those neighbourhoods may not have quick access to a primary health service to get a primary diagnosis.

Recommendations

- The state should address physician/clinic shortages in neighbourhoods further away from the centre (such as Battery Park City).
- Digital health interventions (with the use of apps) could be part of a strategic process to allow residents access to a quick health assessment, or direct them to the nearest care facility (if necessary).
